"MAJORA"

PURE PREPARED PAINTS

"Majora" Pure Mixed Paints are the result of over 50 years' practical and scientific experience—they are manufactured with the aid of specially developed heavy grinding machinery from carefully selected raw materials, scientifically controlled in their combinations so as to ensure maximum covering, durability, and appearance.

"Majora" Pure Mixed Paints are suitable for interior or exterior decoration; they dry with a fine glossy appearance, and retain their lustre and colour indefinitely.

One gallon covers approximately 800 square feet.

DIRECTIONS FOR USE:

Priming or First Coat: Use White or Colours slightly paler than that of finishing coat, add not more than ½ pint Genuine Turpentine (not Mineral Turps) to each gallon.

Finishing Coat: The finishing coat should not be thinned, and care should be taken to see that the first coat is thoroughly dry before applying the final coat.

To ensure that the contents are properly mixed, pour off part of the liquid, stir the remainder thoroughly, then replace the liquid, stirring until an even consistency is obtained.
